PROFESSIONAL SUMMARY

Azure Cloud Engineer with hands-on experience building, securing, and automating enterprise-grade Microsoft Azure environments. Proven ability to architect secure Virtual Networks, enforce least-privilege access with custom RBAC roles, automate infrastructure provisioning using Terraform IaC, build CI/CD pipelines with GitHub Actions, implement centralized monitoring using Log Analytics and KQL, and manage security posture with Microsoft Defender for Cloud.

TECHNICAL SKILLS

Microsoft Azure: Resource Groups, Virtual Networks (VNet), Subnets, NSG, RBAC, Custom RBAC Roles, Log Analytics Workspace, Diagnostic Settings, Azure Monitor, Alert Rules, Action Groups, Azure Policy, Microsoft Defender for Cloud, Storage Accounts

DevOps & Automation: Terraform, Infrastructure as Code (IaC), GitHub Actions, CI/CD Pipelines, GitOps, Azure Service Principal, Automated Deployments

Security & Governance: Least Privilege, IAM, Custom Role Definitions, IP Whitelisting (/32 CIDR), SSH Hardening, Network Isolation, Azure Policy Enforcement, Resource Tagging

Monitoring & Logging: KQL (Kusto Query Language), Activity Log Investigation, Alert Rules, Action Groups, Security Event Detection

Tools: Azure Portal, Git, GitHub, Terraform CLI, Azure CLI, VS Code, Microsoft Defender for Cloud, Azure Cost Management

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900) – Microsoft
- AWS Cloud Quest: Cloud Practitioner (Training) – Amazon Web Services
- AWS Cloud Practitioner Essentials (Training) – Amazon Web Services

PROJECTS

CloudGuard IaC Pipeline – Automated Azure Infrastructure Deployment *Apr 2025 – Apr 2025*

github.com/Prasanth0809/cloudguard-iac-pipeline

- Automated Azure infrastructure provisioning using Terraform IaC, deploying 6 resources (VNet, NSG, subnets, Resource Group) with zero manual portal interaction — eliminating human error and reducing deployment effort by 100%.
- Built a GitHub Actions CI/CD pipeline that automatically triggers terraform init, plan, and apply on every code push — reducing deployment time from manual hours to under 2 minutes.
- Secured pipeline authentication by creating an Azure Service Principal and storing credentials as encrypted GitHub Secrets — ensuring zero credential exposure in source code.
- Structured infrastructure as modular Terraform files (main.tf, vnet.tf, nsg.tf) following production-grade IaC best practices with full version control via Git.

CloudGuard – Enterprise Azure Secure Cloud Infrastructure *Jan 2026 – Mar 2026*

github.com/Prasanth0809/azure-secure-cloud-infrastructure

- Architected a secure Azure environment using dedicated Resource Groups and a structured Virtual Network (10.0.0.0/16) with isolated public (10.0.1.0/24) and private (10.0.2.0/24) subnets, eliminating flat network exposure.
- Reduced attack surface by 100% on sensitive subnets by implementing custom NSG inbound rules restricting SSH access to a single trusted IP (/32 CIDR), preventing unauthorized administrative access.
- Built a centralized security monitoring pipeline by configuring Activity Log Diagnostic Settings to stream administrative, security, and policy events into a dedicated Log Analytics Workspace — enabling real-time subscription-wide visibility.
- Wrote and executed 3 KQL security investigation queries detecting resource write operations, administrative events, and failed operations — validating zero failed events during the monitoring period.
- Enforced least-privilege access by designing a custom RBAC role scoped at subscription level with read-only permissions, eliminating all standing admin privileges across the environment.
- Automated governance compliance by assigning Azure Policy at subscription scope, enforcing mandatory Environment tagging and reducing untagged resource risk to zero.
- Improved security posture by reviewing Microsoft Defender for Cloud Secure Score and mapping controls against the Azure Security Benchmark compliance framework.

EDUCATION

Post Graduate Diploma – Cloud Data Management *Jan 2024 – Apr 2025*

Conestoga College, Kitchener, Ontario, Canada | GPA: 3.34/4.0

B.E – Computer Science & Engineering *Aug 2019 – Apr 2023*

Kumaraguru College of Technology, Coimbatore, India | CGPA: 8.06/10
